

Avielevate

DGCA CPL EXAM PREPARATION

The complete preparation system
for future commercial pilots in India.

DETAILED PLATFORM BROCHURE

Train. Soar. Master.

avielevate.com

THE AVIELEVATE DIFFERENCE

A system built around the real learning loop

Take a test. See the weakness. Drill it. Repeat until the result changes.

PURPOSE Premium DGCA CPL preparation built specifically for pilot students in India - not a generic exam app with an aviation skin.

Avielevate brings practice, feedback, analytics and focused revision into one connected workspace. Every useful number is measured from the student's own activity; the live dashboard does not invent readiness scores, streaks or progress to make the interface look busy.

AIR REG	AIR NAV	MET	TECH GEN	TECH SPEC	RTR
---------	---------	-----	----------	-----------	-----

- **5,700+ published questions.** A substantial four-option bank organised by subject, chapter and subchapter, with disputed items capable of being withheld from live tests until reviewed.
- **Six subject banks.** Air Regulations, Air Navigation, Aviation Meteorology, Technical General, Technical Specific and Radio Telephony.
- **DGCA-aware exam behaviour.** Timed mocks, the displayed 70% pass threshold, no negative marking, aviation units and subject-specific paper settings.
- **Designed for a continuous loop.** The result is not the end of a test; it becomes the source for the next targeted session.

POSITIONING Aviation-grade clarity: Night ops and Day VFR themes, measured performance, honest empty states and restrained motion.

01 | PERSONAL COMMAND CENTRE

A dashboard that measures - never guesses

The student's current position, recent work and next useful action in one view.

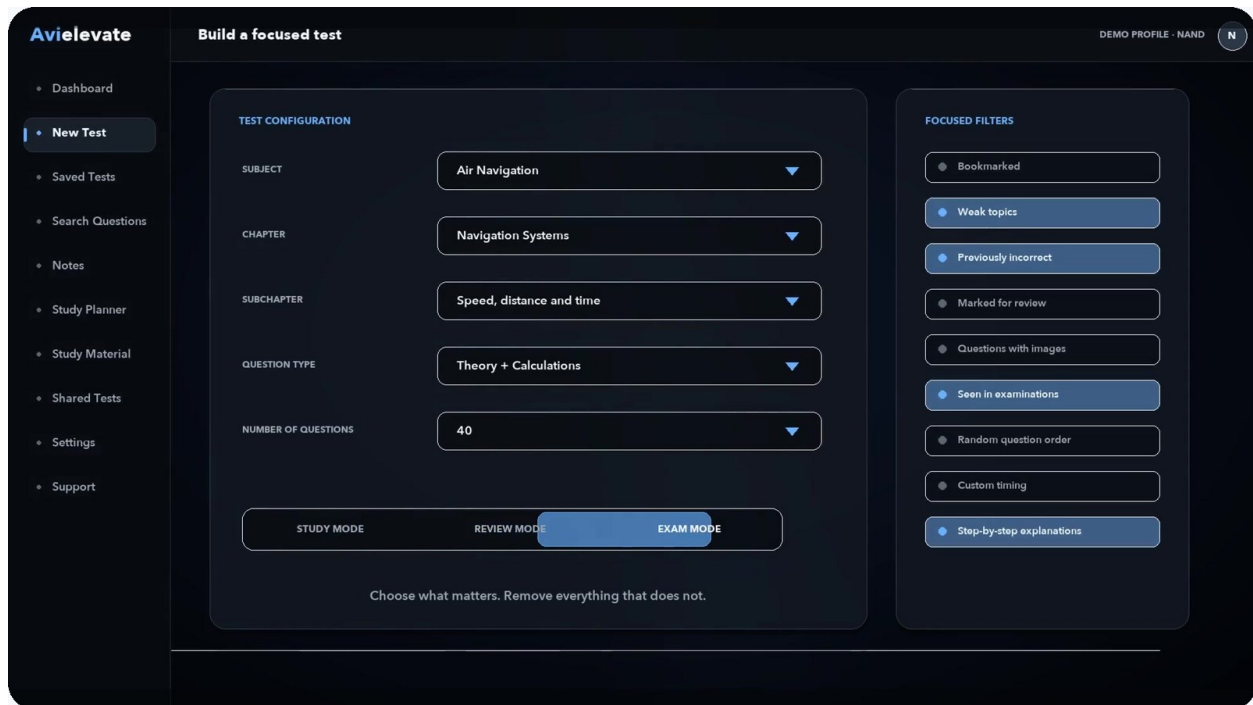

Demonstration profile shown: Nand. Live student figures are calculated from that student's own records.

- **Measured study statistics.** Questions solved, accuracy, average response time, study streak and subject mastery are derived from completed activity.
- **Performance at a glance.** Subject progress, a rolling performance snapshot and recent training activity make patterns visible without opening a report.
- **Today and coming up.** Planner tasks and exam dates can surface on the dashboard so study activity stays tied to the calendar.
- **Fast navigation.** A Ctrl/Cmd-K navigation palette reaches tests, notes, material, planner, comments, settings and support from the main app pages.

02 | BUILD THE RIGHT SESSION

From a full mock to a surgical weak-topic drill

Every control changes the eligible question pool - and Avielevate shows the exact available ceiling before launch.

Cinematic demonstration of the New Test configuration workspace.

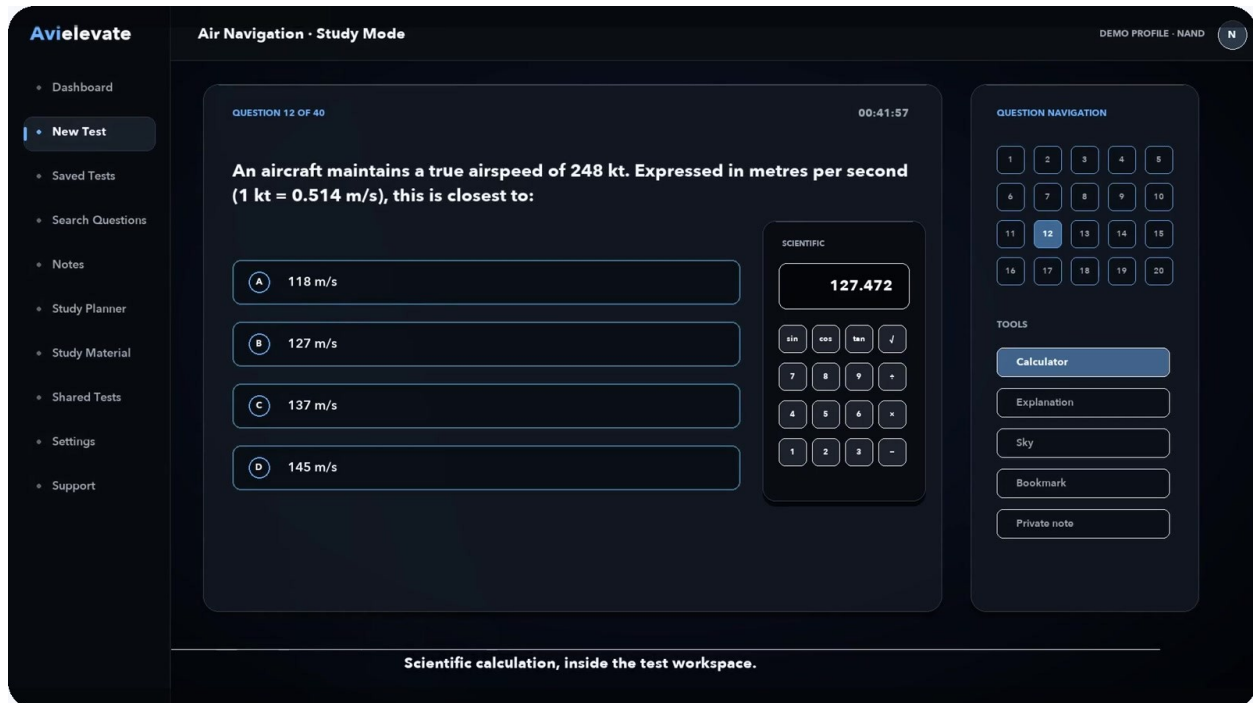

- **Choose the scope.** Select a subject, then optionally narrow by chapter and subchapter, source, theory/calculation type and questions with images.
- **Combine meaningful filters.** Bookmarked, previously incorrect, marked for review and seen-in-exam filters work as cumulative dimensions rather than replacing one another.
- **Control the paper.** Set question count, random or sequential question order, option order, timer behaviour and explanation availability.
- **Prevent empty launches.** The dispatch plan remains on hold until the filtered pool resolves to at least one eligible question.

THREE MODES Study: paced learning with feedback. Review: untimed, unscored practice that is not saved. Exam: paid, timed simulation with results after completion.

03 | QUESTION WORKSPACE

Everything needed to solve the question stays beside it

No cursor choreography, no switching apps and no separate calculator window to interrupt concentration.

A real airspeed conversion question shown with the integrated scientific calculator.

- **Scientific calculator on every question.** A draggable 40-key tool supports DEG/RAD, second functions, powers, roots, factorial, DMS, memory, EXP, Ans and predictable post-equals behaviour.
- **Question navigation.** Move through the paper, see answered and current states, and retain the structure of the session without leaving the workspace.
- **Useful personal actions.** Bookmark the question, mark it for review, record a private note, report that it was seen in an examination and inspect attached imagery in a lightbox.
- **Resilient in-progress state.** The active test is persisted locally so a normal refresh does not silently erase the paper.

04 | LEARN FROM THE ANSWER

Understand the working - not only the letter

Feedback, explanation, private thinking and community context are connected to the exact question.

Study Mode answer feedback and a step-by-step worked explanation.

- **Immediate Study Mode feedback.** The selected option is evaluated and the correct result is shown without waiting for the end of the session.
- **Step-by-step solutions where published.** Explanations show the method and reasoning, not merely the final option. Coverage is actively being expanded across the remaining bank.
- **Sky, the in-question tutor.** Ask for help in the context of the current question without exposing the answer key directly to the browser.
- **Private notes and genuine discussion.** Personal notes stay private; comments, replies and votes come from real accounts, with staff verification and moderation support.

CONTENT INTEGRITY Correct-option identity is preserved even when answers are shuffled, and disputed questions can be structurally excluded from published tests.

05 | PERFORMANCE INTELLIGENCE

Every result becomes the next training plan

The report answers three questions: what happened, where the marks went and what to do next.

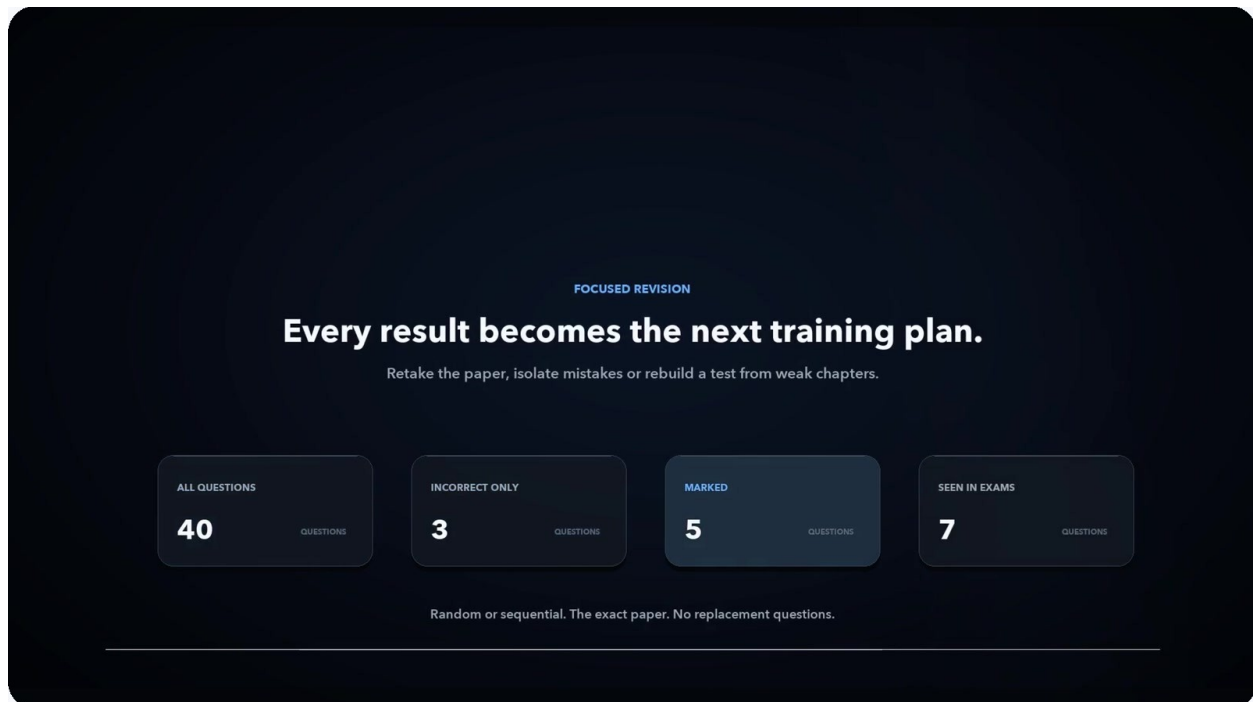

Demonstration analytics: score, subject mastery and weekly activity.

- **Score overview.** See the authoritative score, percentage, pass state and correct, wrong and unanswered totals.
- **Time analysis.** Review time spent and response behaviour instead of looking only at the final mark.
- **Chapter and topic breakdown.** Performance bars show exactly where marks were gained or lost so revision can be prioritised by evidence.
- **Full question review.** Revisit the paper with answer status, explanations, notes and the same question discussion tools available during preparation.
- **Download or share one deterministic PDF.** The summary and full question review are packaged into the same cached file for download or supported file sharing.

06 | REVISION THAT PRESERVES INTENT

Retake the exact paper - or isolate only what matters

No replacement questions are silently substituted when the goal is to revisit a completed set.

Focused retake chooser for all, incorrect, marked and seen-in-exam questions.

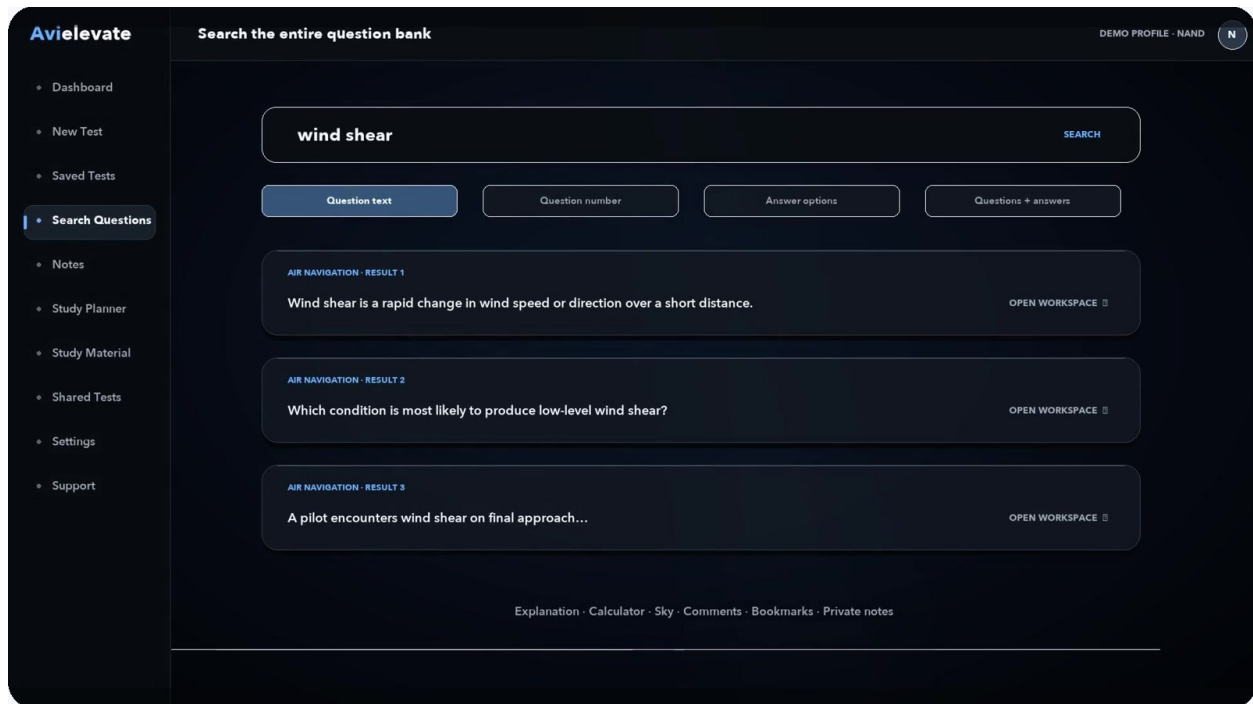

- **Exact-paper retakes.** Choose all questions, wrong only, marked questions or seen-in-exam questions from the completed paper.
- **Independent order controls.** Randomise or preserve question order and option order separately, depending on whether recall or fresh retrieval is the goal.
- **Saved Tests.** Filter and organise saved attempts, review completed work, rename papers and remove records you no longer need.
- **Shared Tests.** Share a test by username, distinguish sent from received sets and let the recipient take the fixed question set from a dedicated page.

DELIBERATE ACCESS RULE Shared-test taking and Exam Mode are protected on the server; changing a button or URL in the browser does not grant access.

07 | FIND AND INVESTIGATE

Search the bank without losing the full workspace

A result opens as a real question experience, not a reduced read-only duplicate.

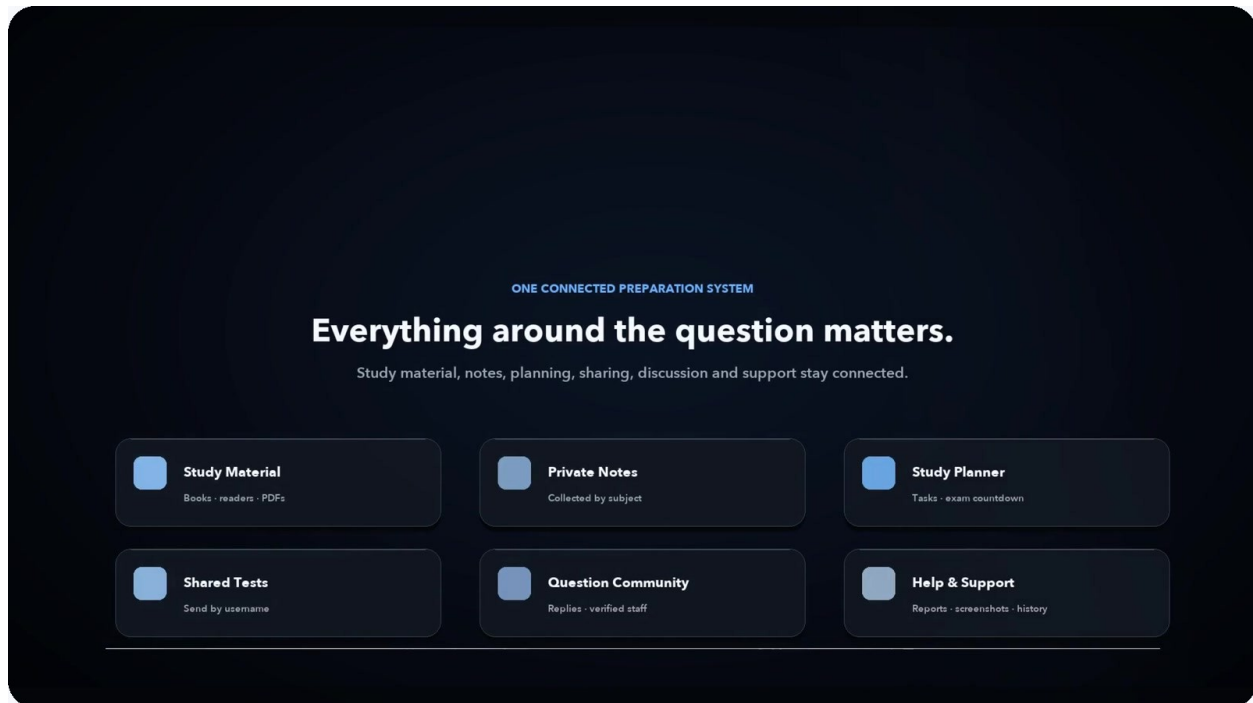

Demonstration search results for an Air Navigation topic.

- **Search across question content.** Locate relevant questions and see their subject, chapter and identifying metadata before opening them.
- **Full workspace in a modal.** Available results open with answer feedback, calculator, explanation, Sky, comments, private notes, bookmark, mark-for-review and seen-in-exam controls.
- **Transparent trial boundaries.** A limited account can see locked result metadata without being misled into thinking a real topic has no questions.
- **One global navigation language.** The same page palette and keyboard controls work across dashboard, saved and shared tests, search, notes, material, planner, comments, settings and support.

08 | PREPARATION BEYOND THE TEST

The surrounding study system stays connected

Material, notes, planning, comments and support remain part of the same preparation record.

The connected Avielevate study surfaces shown as one preparation system.

- **Notes.** Write private notes, organise them by subject and print a compact revision sheet when paper is more useful than another screen.
- **Study Material.** Open published books and PDFs in a themed reader and keep private per-user annotations without creating public file links.
- **Study Planner.** Add tasks and DGCA exam dates to a calendar, mark work complete and receive an email on the evening before a recorded exam.
- **My Comments.** Return to previous questions, filter your contributions and follow replies without remembering where a discussion started.
- **Settings and support.** Manage profile information, daily goal, Night ops/Day VFR/System theme and password; send support messages with screenshots, question references and visible resolution history.

09 | FLYING SCHOOLS AND PLATFORM OPERATIONS

Progress visibility with deliberately limited authority

Instructor and administrative tools are separate from the student workspace and every sensitive action is re-checked by the data layer.

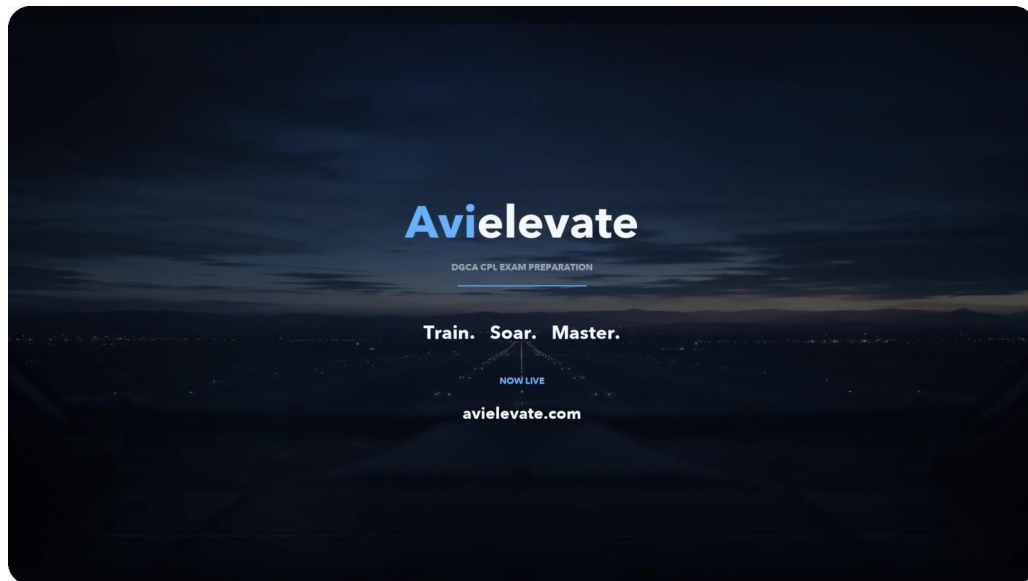

Demonstration instructor console with organisation-level training metrics.

- **Instructor enrolment workflow.** Submit a student enrolment request, track its status and view students who belong to the instructor's organisation.
- **Scoped progress summaries.** Follow permitted student progress and subject-level trends without gaining access to private student notes.
- **Administrative operations.** Manage students and organisations, review enrolment, support and comments, publish study material, inspect reviews and work through the question bank.
- **Question management.** Create, search, edit and preview questions as the student will see them, including options, status and explanation content.
- **Append-only audit trail.** Sensitive organisation and administrative activity is recorded so access and decisions can be reviewed later.

10 | ACCESS, TRUST AND NEXT STEPS

Start with the permanent trial - upgrade when the value is clear

No 14-day countdown. A trial account remains available with access limited to its defined question subset.

Avielevate - DGCA CPL Exam Preparation. Train. Soar. Master.

- **Straightforward, accessible access.** Create an account with email or Google, complete the student profile and use secure password-reset flows when needed. Night ops, Day VFR and System themes persist, with keyboard navigation and reduced-motion support.
- **Trial and paid access are explicit.** The trial is a limited evaluation surface. Active paid access unlocks the applicable full bank and paid-only exam capabilities; institutional access is handled separately.
- **Privacy by design.** Students see their own profiles, attempts, notes, planner items and support history. Instructors see only authorised organisation relationships and permitted progress summaries.
- **Answer-key protection.** Correct answers are not shipped with the question bank. Correctness is revealed through protected server-side checks after the student answers.

BEGIN Visit avielevate.com, create your account and explore the permanent trial question set.

Avielevate is an independent preparation platform and is not the DGCA or an examination authority. It does not guarantee an examination outcome. Feature availability depends on account access and published content.
